

Laser Post-Operative Instructions

A laser was used as part of your therapy today. The laser is used to reduce healing time and post-operative discomfort. The laser more effectively eliminates the bacteria responsible for periodontal disease. It also removes the diseased tissue that lines the pocket and creates a healthier environment.

You may notice some tenderness when brushing or flossing at first. It may last a few days. Resume normal care as comfort allows.

Please call if you have any questions and concerns:

Office: 260-471-1222 or 800- 572-2655, **Dr. Lee:** (C) 260-494-7496
